

CHÂTEAU CHEVAL BLANC

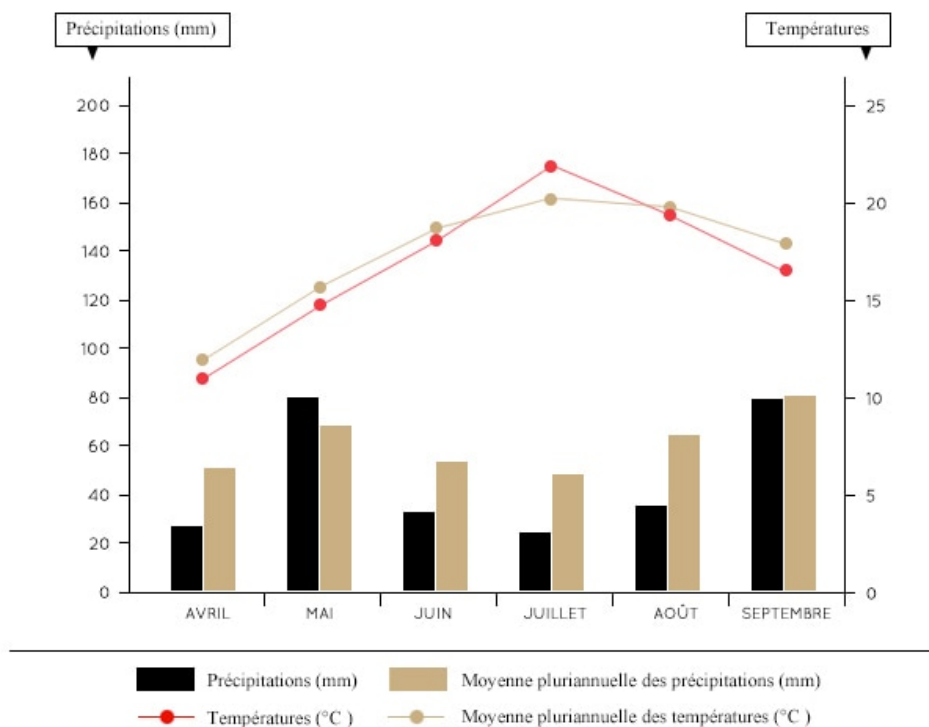

« An awful year for winegrowing, with wet, windy, cold weather, » according to Claude Fourcaud-Laussac, one of the owners of Château Cheval Blanc in 1968. The wine was sold as simple AOC Saint Emilion.

The 1968 growing season was not only very wet, but also much chillier than usual from May to September. These conditions were not compatible with making quality wine.

TEMPERATURES AND RAINFALL

The 1968 growing season was not only very wet, but also much chillier than usual from May to September. These conditions were not compatible with making quality wine.

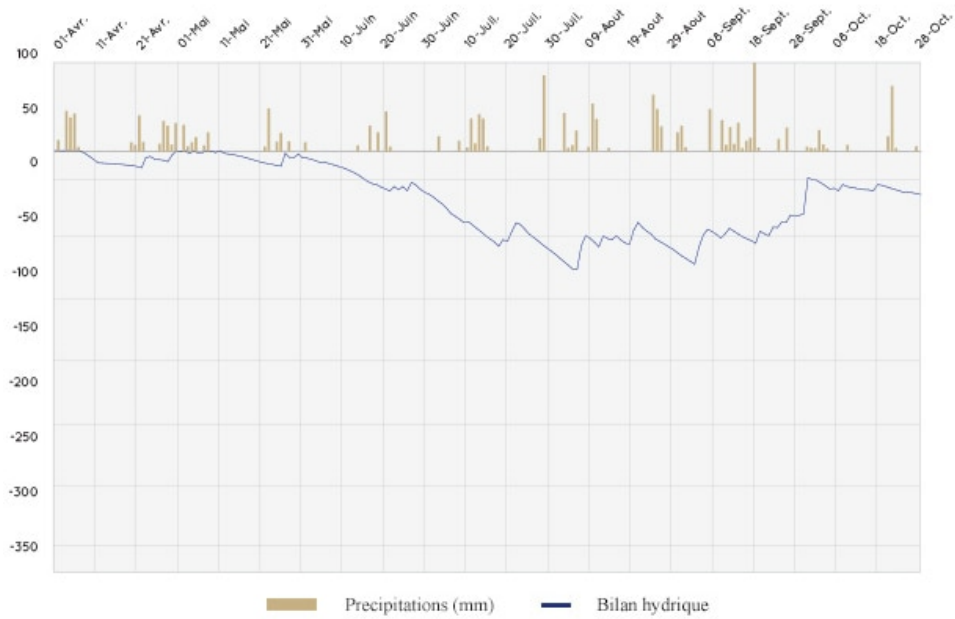

1968 : TEMPERATURES AND RAINFALL COMPARED WITH NORMAL VALUES IN SAINT-EMILION

WATER BALANCE

In order to grow well, the vine needs for water stress to set in slowly so the grapes to ripen well and become concentrated. The water balance shows that there was very little water stress this year. The soil was practically waterlogged during the harvest, which is very rare in Bordeaux.

1968 WATER BALANCE

GROWING SEASON

The weather in 1968 was very poor during the « crucial » months i.e. ripening. The harvest took place from the 1st to the 12th of October. Yields were low (25.5 hectolitres per hectare) and there was an alcoholic degree of 12°. The wine was declassified and sold as generic Saint Emilion.

	Begin	End
1968 harvest dates	October, 1st	October, 12th
Average harvest dates: 1946-2014	September, 24th	October, 8th

RIPENING AND YIELDS

1968 yield (hl/ha)	Average yield (1946 to 2014)
25.5	33.9
